

# Phone number Management System

## Description

Our simple phone number management system will have the following features:

1. Storage for the numbers;
2. Ability to add numbers to the storage;
3. Ability to remove numbers from storage;
4. Ability to print all the numbers in the storage;

## PnMS Structure:

1. The phone numbers themselves
2. PnMs - the management system
3. PnMS Tester - the tester class

### ***Class PhoneNum:***

This class should have fields like the name of the person and their phone number

String Name

Integer Number

### ***Class PnMS:***

This class should have an inner structure for storing numbers. It should have methods for adding and removing books. It should also have a function that'll print all the numbers

List<PhoneNum>

Void addNum(PhoneNum);

Boolean removeNum(PhoneNum);

Void printStorage();

### ***Class PnMS Tester:***

We'll use this class to test our PnMS. We'll create some friends' phone numbers and then try adding, removing and printing them
